

# Checklist

## IT Documentation Solution

**Find the right IT Documentation Solution for your business.** No company needs *everything*. The right IT documentation solution is the one that perfectly matches your requirements. Use this checklist to identify which features matter most to your organization.

### 1. Asset Documentation

Yes

Physical assets (cables, switches, routers, servers, racks, printers, notebooks, etc.)

Virtual components

Logical network structures

Cloud infrastructure elements and services

Applications including license management and contract management

Business services

### 2. Visualization, Planning Support & Process Management

Yes

Realistic representation of all infrastructure components

Clear visualization of all dependencies and relationships of the infrastructure

Analytics dashboards for easy data analysis

Planning functionality for the implementation of changes

Simple transfer of the planned changes to the actual state

Process management for controlling the implementation of changes

### 4. Ease of Use

Yes

Comprehensive component library containing devices from all manufacturers to support fast documentation

Simple filter and search options for all documented information

App for smartphones and tablets

### 5. Implementation, Service & Support

Yes

Configurable out-of-the-box system

Can be extended on a modular basis to other areas of the IT and telecommunications infrastructure

Can be operated on-premises and in the cloud

Predefined standard interfaces

Bi-directional interfaces to any other applications

Flexible, comprehensive roles and rights concept

Extensive services and support options available as an add-on

### You've clearly defined your requirements.

Let's discuss how our solution can meet them in the best possible way.
